business.**

AMESTO INSIGHT

## Power BI for SuperOffice

Make better decisions based on actual data

### Flexible analysis tool based on Power BI

Amesto Insight is a Power BI connector for SuperOffice CRM, which allows you to visualize all data stored in SuperOffice via Microsoft Power BI.

Amesto Insight retrieves data from SuperOffice CRM directly into Microsoft Power BI, where they can be processed / displayed and possibly combined with data from Microsoft Excel or other data sources.

### Standard report package

As a part of Amesto Insight, you also get a pack of 6 predefined dashboards / reports. These can be used directly without customizations, but they can also be customized according to your own wishes.

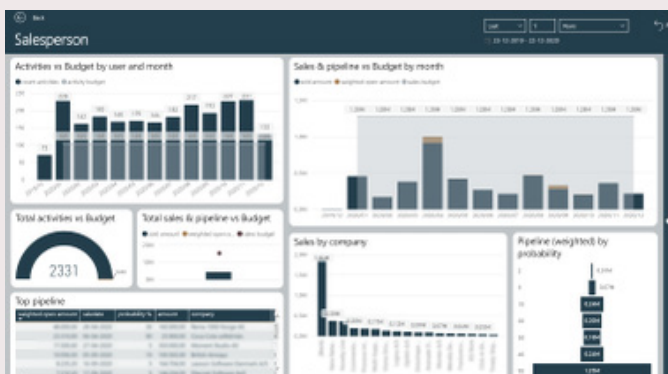

### Combine data from multiple systems

In many cases, it is of great value to retrieve data from other systems within the company and combine these with data from SuperOffice CRM. Eg. the budget and the actual result can be retrieved from the financial system and combined with a weighted pipeline from SuperOffice.

### Visualize key figures in an intuitive way!

Create intuitive and attractive reports that users like and see as value-creating.

Power BI has unique options for designing and customizing the look of your dashboards according to the company's graphic profile, just as you can decide which key figures to display.

# Amesto Insight

## Advantages

The package contains 6 standard dashboards, designed to show the most common queries.

All reports can be customized as desired, just as it is possible to prepare additional reports yourself.

- Make decisions based on updated data.
- Get all SuperOffice CRM data directly in Power BI.
- Make your own dashboards
- Easy to embed own budgets for e.g. turnover or number of activities per employee via Excel.

## Technology

Power BI is an add-on product from the Microsoft Office family, making it as easy to acquire as Outlook and Excel, especially if you run Office 365.

If you want to change in standard dashboards or share your dashboards with other users, a Power BI Pro license is required, otherwise it is enough to have the free Power BI Desktop.

*It is easy to enter e.g. budget numbers or budgeted number of customer visits in Excel, and then combine these with data from SuperOffice and thereby get a speedometer which shows the development up against budget.*

## Amesto Solutions - Simplifying Business

Amesto Solutions is the largest Visma and SuperOffice partner in the Nordic. We have delivered more than 2,500 logistics solutions based on Visma Business over the last 30 years. In addition, we have implemented CRM with over 1,000 customers throughout the Nordic region. Our great strength lies in the integration of the various systems.
